# **Exploratory Data Analysis on Bank Defaulters**

By – Mehak Oberoi

#### Aim

- To decrease Approvals to Defaulters
- To increase the number of loans given

#### Solution

- Decrease the Credit amount for a given Values of Goods to risky or more likely groups of defaulters
- Increase the Annuity for a given Values of Goods to risky or more likely groups of defaulters
- Based on the previous performance of a Repeater Client vary the Amount of Credit and Annuity issued
- Approach more Low-Risk groups with better benefits (More Credit on same value of goods, lower Annuity on same value of goods)

## Risky Groups

- Working Professionals
- Renters
- Single/Unmarried
- Labourers
- Self-employed

## Low - Risk Groups

- Pensioners
- Academic degree holders
- Higher Educated
- House/Apartment residents
- Widows
- Ages 45-70

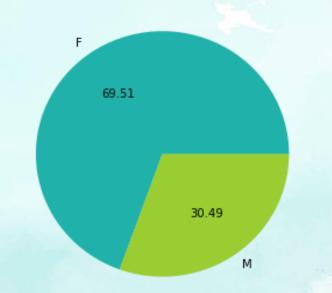

Difficulty in Paying Loan based on Gender

61.61

No relation based on Gender

Non-Difficulty in Paying Loan based on Gender

Difficulty in Paying Loan based on Ownership of House

Non-Difficulty in Paying Loan based on Ownership of House
